

LEAD FREE – “ETAMVIT” TIP TINNER

ETAMVIT

MBO - LEAD FREE “ETAMVIT” TIP TINNER is a mixture of Tin/Silver/Copper solder powder and thermally stable, oxide-reducing compounds. Etamvit Tip Tinner provides better cleaning and re-tinning of highly oxidized soldering iron tips than wet sponge or rosin-cored wire.

Application Methods:

While maintaining the solder iron at operating temperature, roll or wipe the solder iron tip over the surface of the Etamvit Tip Tinner for a short time. Prolonged contact may create excessive fumes. Under normal usage, the fumes are very minimal and usually stop within seconds after solder iron is withdrawn from the Etamvit Tip Tinner. The residue remaining after heating is minimal and non-corrosive. It can be readily removed by wiping on a wet sponge.

Packaging and Availability:

Tip Tinner is packed in 20g (Sn/Cu), 28g (Sn/Ag/Cu) and 250g (Sn/Ag/Cu) cans.

Storage and Disposal:

Tip Tinner should be stored in a cool, dry place. Dispose of in accordance with local regulations.
